

Differences between Interfaces & Abstract Class

Interfaces	Abstract Class
1. Interface can implement several interface	1. Abstract class can be extended by only one class
2. Can contain only abstract default & static method	2. Can contain both abstract and concrete class
3. Can't have constructor	3. Can have constructor
4. Slightly slow	4. Slightly fast
5. Methods are public by default	5. Can have any access modifier
6. Ideal for code Reusability	6. Not Ideal for Reusability.
